To whom it may concern.

Re: Recycled Content of Drexel Metals Galvalume

Drexel Metals Inc. proudly uses domestically produced manufactured by a basic oxygen furnace with 24.6% post consumer recycled content and 6.6% postindustrial content. This can contribute to the material and resources 4.1 LEED credit.

Here is a brief explanation of the terms used above;

- Recycled-content product is an item that contains recovered materials. Recovered materials are wastes that have been diverted from conventional disposal such as landfills for another use. Recovered materials include both post-consumer and post-industrial wastes.
- Post-consumer: Post-consumer recycled materials have served their intended use, been collected from the end-user, and reprocessed.
- Post-industrial: Post-industrial recycled material is usually derived from manufacturing waste or sub-standard products that have not been used

Drexel Metals products are considered sustainable, are recyclable at the end of their useful life and have the ability to continue the recycle loop as our products can be used over and over again!

Thank you for choosing Drexel Metals!

Best Regards,

Brian Partyka
