

Product Announcement - Board and Batten  
December 4, 2023

To: Drexel Metals' Customers

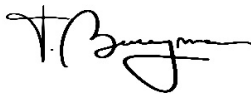

We are pleased to announce the addition of Board and Batten to the DMC Wall Series. This profile generates clean lines and patterns and features alternating wide vertical boards and narrower 2" elevated battens. The ¾" panel depth creates dimensional interest while keeping trim offsets to a minimum. This profile is mechanically fastened through pre-punched holes. To achieve the clean look Board and Batten is known for, fasteners are concealed under the subsequent panel's batten.

Panels must be installed vertically for wall applications, limiting panel lengths to 30' for steel and 22' for aluminum. Standard panel widths are 12" and 16" (nominal). Panels are available in 24-gauge steel and .032 aluminum substrates with our standard solid colors.

Although primarily focused on residential applications, this panel can be well suited for many commercial needs.

For more detailed information, please refer to the Board and Batten data sheet.

Sincerely,

Todd Bergman  
Carlisle Architectural Metals Product Manager
